## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “at least one . . . paddle blade” (see new claims 14 and 15) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 14 and 15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The new claims include the phrase “at least one . . . paddle blade” and specificational basis was not provided nor found.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 9 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Eickelmann (U.S Pat. No. 4,472,063).

Applicants claim a stirred tank that contains a stirring impeller that has a diameter that is 60-90% the diameter of the tank's inner walls. The recitation directed to the tank containing a yeast slurry is considered to be an intended use and therefore is not a limitation on the claimed invention. Further, the claimed height of the impeller is based on the amount of yeast that is normally stored in the tank, and because this limitation is indefinite, it cannot be analyzed with respect to the prior art.

Eickelmann teaches a mixer implement for liquids. While no numbers are taught with respect to the diameter of the impeller or the tank, a measurement of Figure 2 shows that the impeller has a diameter of about 75% of the inner diameter of the tank. It is noted that the paddle blades of Eickelmann are partially vertical.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1761

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-7 and 10-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grylls et al. (U.S. Pat. No. 4,188,407)(hereinafter Grylls) in view of Okamoto.

Grylls teaches the production of active dried yeast whereby yeast is placed in a stirred tank and a rotor blade "that moves around the periphery of the bed forcing the yeast towards the center of the bed. Thus a preferred apparatus comprises a slowly rotating (e.g. 2 to 0 or 100, preferably 10 to 20 rpm) rotor blade that sweeps the periphery of the bed and one or more fast rotating blades." (Col. 5, lines 17-30). While the phrase "periphery of the bed" indicates that the blade extends to the walls of the tank, Grylls does not literally teach the dimensions of the rotor blade.

Eikermann teaches that cited above. It would have been obvious to those of ordinary skill in the art to utilize the rotor blades of Eikermann in the process of Grylls because they would extend to the periphery of the yeast bed.

It is noted that applicants assert that the prior art blades are not as efficient at stirring as the claimed blades, but no evidence has been presented that actually compares efficiencies.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-7 and 9-15 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Art Unit: 1761

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
